Elnur Abaslı

eabasli@icloud.com | eabasli.com | linkedin.com/in/eabasli | github.com/KomoGit

Skills

Programming Languages: Java, C#, SQL
Frameworks: .NET, Selenium, Playwright, Appium
Developer Tools: Git, Docker, Jenkins, GitHub Actions, Postman, Swagger
Libraries: JUnit, NUnit, RestAssured
Other: Agile, Scrum, Kanban, Prompt-engineering

Experience

QA Engineer (Selenium, Java, C#, Allure, CI/CD) 07/2025 – 08/2026
AndersenLab - Hybrid *Baku, Azerbaijan*

- **Architected and developed** custom, from-scratch automation frameworks utilizing both C# and Java with Selenium and RestAssured, engineered to support extensive UI and API testing, suited to be integrated in CI/CD pipelines.
- **Authored** detailed test cases, bug reports and technical documentation, while actively managing and updating the QA Space Confluence wiki to centralize knowledge and streamline team alignment.
- **Conducted** manual tests along with automation tests, with reports written in tools such as TestRail to ensure full coverage.

QA Engineer (Selenium, C#, Gauge (BDD) Framework) 10/2024 – 07/2025
Prosys MMC - On Site *Baku, Azerbaijan*

- **Authored and maintained** comprehensive test documentation, including strategic test plans, detailed test cases, bug reports and execution reports to establish clear quality baselines.
- **Engineered** robust, end-to-end automated UI tests utilizing Selenium, C#, and Behavior-Driven Development (BDD) principles with Gauge.
- **Executed** automated regression testing suites at the onset of each sprint, systematically identifying, reporting, and tracking issues to ensure software stability.

.NET Developer (.NET, Docker, NGinx) 03/2024 – 10/2024
ZeStudio - On Site *Baku, Azerbaijan*

- **Architected and maintained** scalable application infrastructure, engineering custom dependency injection NuGet packages and automated email notification services to streamline development cycles.
- **Designed and implemented** secure online payment systems, successfully integrating the Kapital Bank API utilizing CQRS and MediatR design patterns.
- **Directed** daily technical operations, conducting rigorous code reviews and mentoring development teams to ensure high-quality, efficient software delivery.

Projects

Mockery | *.NET, C#*

- **Built** and published an open-source tool used to simulate APIs during software testing, eliminating dependency on live third-party services in test environments.
- **Developed** a custom pattern engine to dynamically generate realistic, formatted test data (such as IDs, tokens, and credentials) on the fly.
- **View it:** https://github.com/KomoGit/Mockery

Selenium Test Automation Framework | *.NET / C#, Selenium, Gherkin*

- **Architected** end-to-end CI/CD pipelines via GitHub Actions to trigger automated test suites on pull requests and scheduled runs, publishing real-time execution reports and build artifacts.
- **Optimized** test execution speed via parallel test runs across local environments and remote Selenium Grid nodes, significantly cutting suite runtime while maintaining thread safety.
- **View it:** https://github.com/KomoGit/Selenium-Automation-Framework

Languages

Azerbaijani(Native), English(C1), German(A1), Russian(A2)

Education

Lankaran State University — Lankaran, Azerbaijan
Bachelor of Agronomy — *October 2018 – June 2022*
